

Lecture 23: Midterm Exam 2 (in class)

Jamie Haddock

Table of contents

- 1 Midterm 2Held in class today, covering Lecture 14 through Lecture 22.: {callout-note icon=false}## Definition: Topics checklist- Markov's and Chebyshev's inequalities; the Weak and Strong Laws of Large Numbers.- Convergence in probability; the Central Limit Theorem; the Chernoff bound.- The Bernoulli and Poisson processes (merging/splitting).- Discrete- and continuous-time Markov chains: transition matrices, stationary distributions, absorption.- Point estimation: bias, variance, MSE.:—Good luck! After Thanksgiving we turn to maximum likelihood and Bayesian estimation.## Reading & HomeworkReading: §5-9 intro (cumulative since Midterm 1) (Bertsekas & Tsitsiklis, Introduction to Probability).
